# Business Continuity and Resilience Education and Consulting Services

...helping businesses maintain continuity.

For more information on business continuity and resilience training and consulting services, email us at [info@sentryx.com](mailto:info@sentryx.com) or visit our web site at [www.sentryx.com](http://www.sentryx.com).

Without an effective business continuity program businesses stand little chance of surviving unexpected business interruptions. A business continuity program enables businesses to achieve resilience to business interruptions through a planning and management process that includes:

- Business continuity project initiation and management,
- Risk management and evaluation,
- Business impact analysis,
- Emergency response and operations,
- Business continuity strategy,
- Business continuity plan development,
- Business continuity training and awareness,
- Business continuity plan testing,
- Business continuity plan maintenance,
- Public relations and communications, and
- Coordination with public authorities.

Our business continuity training and consulting services are designed to prepare organizations to deal with business interruptions ranging from minor outages to major disasters. Both training and consulting services are based on industry standards, guidelines, and best practices for business continuity such as ISO/IEC 17799, CobiT, NFPA, BS 25999, and Spring Singapore TR 19.

Sentryx is dedicated to helping organizations achieve resilience to unexpected business interruptions ranging from minor disruptions to major disasters

## Our Training Services

Our training services deliver the principles and concepts of business continuity, and the skills to develop, test, and a business continuity plan. Our training services include the following courses:
